

Product Requirements Document (PRD)

Project: Custom Greetings & Wishes App (Internship Task)

1. Project Overview

The objective is to develop a mobile/web application that enables users to create personalized greeting cards and wishes. The app allows users to select background templates and automatically overlays their profile picture and name onto the image for a customized experience.

2. Core Features

2.1 Authentication

- User Login flow (Google, Email, or Guest).
- Profile setup: Capture user name and profile picture.

2.2 Home Page

- Categorized templates (e.g., Birthday, Anniversary, Festivals).
- Image Listing: A grid view showing background images.
- Live Preview: Templates should display the user's name and photo as an overlay by default.

2.3 Personalization & Sharing

- Action Button: A 'Share' button that merges the layers into a single image.
- Social Integration: Support for WhatsApp, Instagram, Email, etc., via the native share sheet.

2.4 Monetization (Premium Features)

- Content Status: Clearly distinguish between 'Free' and 'Premium' images.
- Subscription Trigger: Clicking a premium image opens a subscription/upsell popup.

3. Task Submission Requirements

Candidates must submit the following three items for evaluation:

3.1 Git Repository

- Public link to the source code (GitHub/GitLab).
- Comprehensive README.md with setup instructions.

3.2 Video Demo

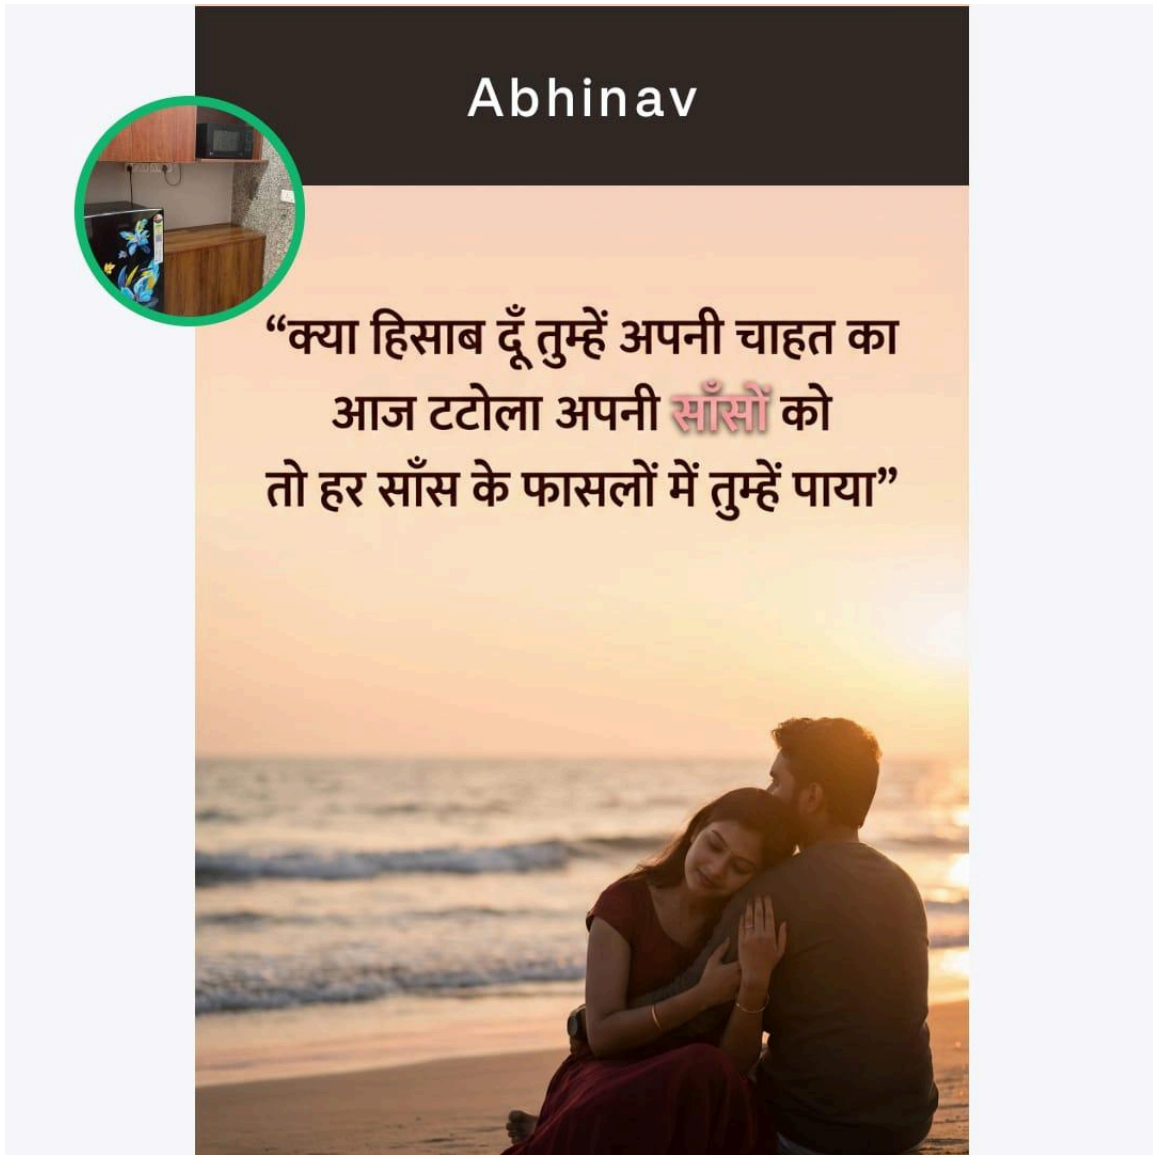

- • A screen recording showing the full app flow: Login -> Home -> Premium Popup -> Image Personalization -> Sharing.

3.3 Technical Approach Document

A written document (PDF or Markdown) explaining:

- • Problem-solving approach: How the image overlay logic was implemented.
- • Tech Stack: List of tools, frameworks, and third-party libraries used.
- • Challenges: Any technical hurdles faced and how they were overcome.
- • Future Improvements: Scalability considerations.

तू पास हो या दूर, फर्क नहीं पड़ता,
तेरा खयाल ही मेरे घेहरे पर मुस्कान ला देता है।
